

Zippy Piezo Inverter

The ultimate solution for LCD backlight

Application Notes 3

Lamp current jumper select

All our generic version Piezo inverters have 2 jumpers (as shown) that can be easily changed to select lamp current. Currently, factory pre-set value is 5-6-7ma to accommodate most LCD panels on the market. We can easily change it to 4-5-6ma (or other configurations) to meet panel spec. We will assign dedicated PN for this configuration.

Depending on lamp configurations, lamp current selection jumpers may install in vertical or horizontal position but it all works same way as following:

- Both jumpers ON : 5ma
- Any jumper OFF : 6ma
- Both jumpers OFF : 7ma
